

Oxygen Cylinder Filling Recommendations

Some DAN Emergency Oxygen for Scuba Diving Injuries (EO2) providers and instructors have difficulty locating a place at which their oxygen cylinders can be filled. Although DAN does not maintain a list of businesses that will fill these cylinders, we can provide the following recommendations and potential solutions:

1. DAN has an agreement with Praxair (now Linde) that allows DAN providers and instructors to get their oxygen cylinders filled if a current DAN Emergency Oxygen credential card is presented.
2. Ask for aviator grade oxygen as it does not require a prescription.
3. Local dive shops that use partial pressure blending for nitrox or trimix may be able to fill your oxygen cylinder.

Further questions or concerns can be directed to DAN Safety Services at 919-684-2948, Option 2 or at oxygen@dan.org.
